# STATEMENT OF DIRECTORS' RESPONSIBILITIES IN RELATION TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE 2019

The Directors accept responsibility for the preparation of the accompanying financial statements, which have been prepared using appropriate accounting policies supported by reasonable and prudent judgments and estimates in accordance with the International Financial Reporting Standards; in compliance with the Financial Reporting Council Act and in the manner required by the Companies and Allied Matters Act.

The accompanying financial statements give a true and fair view of the state of the financial affairs of the Company, in accordance with the International Financial Reporting Standards; in compliance with the Financial Reporting Council of Nigeria Act and in the manner required by Companies and Allied Matters Act.

The Directors further accept responsibility for the maintenance of adequate accounting records as required by the Companies and Allied Matters Act, Laws of the Federation of Nigeria and for such internal controls as the Directors determine is necessary to enable the preparation of financial statements that are free from material misstatements whether due to fraud or error.

The Directors have made assessment of the company's ability to continue as a going concern and have no reason to believe that the company will not remain a going concern in the years ahead.

Signed on behalf of the Board of Directors by:

AbdulWasiu O. Sowami

Chairman

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### 1. The Company

# 1.1 Reporting entity

The Company was incorporated on 11 December 1964 as British Petroleum. It became African Petroleum through the nationalisation policy of the Federal Government of Nigeria in 1979. The Company changed its name to Forte Oil Plc in December 2010 as a result of a restructuring and rebranding exercise. In June. 2019, Ignite Investments and Commodities Limited became the majority shareholder in Forte Oil Plc after the former majority shareholder disposed off his shares in the Company.

During the period, the Company disposed of its Upstream Services, Power and a portion of its Fuel segments. The Company disposed AP Oil and Gas Ghana, Forte Upstream Service Limited and Amperion Power Distribution Company Limited.

#### 2 Principal activities

The Company engages in the marketing of petroleum products which is divided into fuels, lubricants and greases.

### 3 Basis of preparation

### 3.1 Statement of compliance

These interim financial statements have been prepared in accordance with International Financial Reporting Standard (IFRS) as issued by the International Accounting Standard Board (IASB) and in compliance with the Financial Reporting Council of Nigeria Act. The financial statements for the period ended 30 June 2019, have been prepared in accordance with IAS-34 Interim Financial Reporting.

### 3.2 Functional/presentation currency

This financial statement is presented in Naira, which is the Company's functional currency, Except as indicated in this financial statements, financial information presented in Naira has been rounded to the nearest thousand.

### 3.3 New standards, interpretations and amendments adopted by the Company

### 3.3.1 1FRS 16, 'Leases'

IFRS 16 was issued which introduces a number of significant changes to the lease accounting model under IFRSs, including a requirement for leases to recognize nearly all leases on their balance sheets. IFRS 16 will supersede the current leases guidance including IAS 17 Leases, IFRIC 4 Determing whether an Arrangement contains a lease, SIC 15- Operating leases incentives, SIC 27-Evaluating the substance of Transactions involving the legal form of

IFRS 16 specifies how an IFRS reporter will recognise, measure, present and disclose leases. The standard provides a single lessee accounting model, requiring lessees to recognise assets and liabilities for all leases unless the lease term is 12 months or less or the underlying asset has a low value. Lessors continue to classify leases as operating or finance, with IFRS 16's approach to lessor accounting substantially unchanged from its predecessor, IAS 17.

### Impact on initial application

The Company is currently assessing IFRS 16's full impact. However, the Company will adopt the standard for the year ending 31 December 2019.

### 3.3.2 Uncertainty over Income Tax Treatments (IFRIC Interpretation 23)

In June 2017, the IASB issued IFRIC Interpretation 23 Uncertainty over Income Tax Treatments in response to diversity in practice for various issues in circumstances in which there is uncertainty in the application of the tax law. While IAS 12 Income Taxes provides requirements on the recognition and measurement of current and deferred tax liabilities and assets, there is diversity in the accounting for income tax treatments that have yet to be accepted by tax authorities.

The Interpretation requires an entity to:

- reflect an uncertainty in the amount of income tax payable (recoverable) if it is probable that it will pay (or recover) an amount for the uncertainty;
- measure a tax uncertainty based on the most likely amount or expected value depending on whichever method better predicts the amount payable (recoverable);
- reassess the judgements and estimates applied if facts and circumstances change (e.g. as a result of examination

or action by tax authorities, following changes in tax rules or when a tax authority's right to challenge a treatment

expires); and

• consider whether uncertain tax treatments should be considered separately, or together as a Company, based on

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

which approach provides better predictions of the resolution;

The Interpretation is applicable for annual periods beginning on or after January 1, 2019.

#### Impact on Initial Application

The amendment to the standard might not have any impact on the Company's financial statements when it becomes effective in 2019.

### 3.3.3 IFRIC Interpretation 23 Uncertainty over Income Tax Treatments

In June 2017, the IASB issued IFRIC Interpretation 23 Uncertainty over Income Tax Treatments which clarifies application of the recognition and measurement requirements in IAS 12 Income Taxes when there is uncertainty over income tax treatments. The interpretation addresses the accounting for income taxes when tax treatments involve uncertainty that affects the application of IAS 12. The interpretation does not apply to taxes or levies outside the scope of IAS 12, nor does it specifically include requirements relating to interest and penalties associated with uncertain tax treatments. Key requirements; The interpretation specifically addresses the following:

- · Whether an entity considers uncertain tax treatments separately
- The assumptions an entity makes about the examination of tax treatments by taxation authorities
- · How an entity determines taxable profit (tax loss), tax bases, unused tax losses, unused tax credits and tax rates
- · How an entity considers changes in facts and circumstances

An entity has to determine whether to consider each uncertain tax treatment separately or together with one or more other uncertain tax treatments. The approach that better predicts the resolution of the uncertainty should be followed.

Effective date and transition The interpretation is effective for annual reporting periods beginning on or after 1 January 2019, but certain transition reliefs are available.

### 3.3.4 Prepayment Features with Negative Compensation - Amendments to IFRS 9

Key requirements Under IFRS 9, a debt instrument can be measured at amortised cost or at fair value through other comprehensive income, provided that the contractual cash flows are 'solely payments of principal and interest on the principal amount outstanding' (the SPPI criterion) and the instrument is held within the appropriate business model for that classification.

The amendments to IFRS 9 clarifies that a financial asset passes the SPPI criterion regardless of the event or circumstance that causes the early termination of the contract and irrespective of which party pays or receives reasonable compensation for the early termination of the contract.

The basis for conclusion to the amendments clarifies that the early termination can result from a contractual term or from an event outside the control of the parties to the contract, such as a change in law or regulation leading to the early termination of the contract. Transition - The amendments must be applied retrospectively; earlier application is permitted. The amendment provides specific transition provisions if it is only applied in 2019 rather than in 2018 with the rest of IFRS 9.

Effective date and transition:- The interpretation is effective for annual reporting periods beginning on or after 1 January 2019.

### 3.3.5 Plan Amendment, Curtailment or Settlement - Amendments to IAS 19

Key requirements; The amendments to IAS 19 Employee Benefits address the accounting when a plan amendment, curtailment or settlement occurs during a reporting period. Determining the current service cost and net interest When accounting for defined benefit plans under IAS 19, the standard generally requires entities to measure the current service cost using actuarial assumptions determined at the start of the annual reporting period. Similarly, the net interest is generally calculated by multiplying the net defined benefit liability (asset) by the discount rate, both as determined at the start of the annual reporting period. The amendments specify that when a plan amendment, curtailment or settlement occurs during the annual reporting period, an entity is required to:

- Determine current service cost for the remainder of the period after the plan amendment, curtailment or settlement, using the actuarial assumptions used to remeasure the net defined benefit liability (asset) reflecting the benefits offered under the plan and the plan assets after that event.
- Determine net interest for the remainder of the period after the plan amendment, curtailment or settlement using: the net defined benefit liability (asset) reflecting the benefits offered under the plan and the plan assets after that event; and the discount rate used to remeasure that net defined benefit liability (asset) Effect on asset ceiling requirements.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

A plan amendment, curtailment or settlement may reduce or eliminate a surplus in a defined benefit plan, which may cause the effect of the asset ceiling to change. The amendments clarify that an entity first determines any past service cost, or a gain or loss on settlement, without considering the effect of the asset ceiling. This amount is recognised in profit or loss. An entity then determines the effect of the asset ceiling after the plan amendment, curtailment or settlement. Any change in that effect, excluding amounts included in the net interest, is recognised in other comprehensive income. This clarification provides that entities might have to recognise a past service cost, or a gain or loss on settlement, that reduces a surplus that was not recognised before. Changes in the effect of the asset ceiling are not netted with such amounts.

Transition:- The amendments apply to plan amendments, curtailments, or settlements occurring on or after the beginning of the first annual reporting period that begins on or after 1 January 2019.

# 3.3.6 Long-term interests in associates and joint ventures - Amendments to IAS 28

Key requirements; The amendments clarify that an entity applies IFRS 9 Financial Instruments to long-term interests in an associate or joint venture to which the equity method is not applied but that, in substance, form part of the net investment in the associate or joint venture (long-term interests). This clarification is relevant because it implies that the expected credit loss model in IFRS 9 applies to such long-term interests.

The Board also clarified that, in applying IFRS 9, an entity does not take account of any losses of the associate or joint venture, or any impairment losses on the net investment, recognised as adjustments to the net investment in the associate or joint venture that arise from applying IAS 28 Investments in Associates and Joint Ventures. To illustrate how entities apply the requirements in IAS 28 and IFRS 9 with respect to long-term interests, the Board also published an illustrative example when it issued the amendments. Transition Entities must apply the amendments retrospectively, with certain exceptions.

Effective date and transition; The interpretation is effective for annual reporting periods beginning on or after 1 January 2019.

New standards and interpretations not yet adopted Standards and interpretations issued but not yet effective.

### 3.3.7 Applying IFRS 9 Financial Instruments with IFRS 4 Insurance Contracts

IFRS 17 is effective for annual periods beginning on or after January 1, 2021, well after the effective date of IFRS 9 Financial Instruments, January 1, 2018. IFRS 9 will cover a majority of an insurer's investments; therefore, the expected differing effective dates created concerns relating to temporary volatility and accounting mismatches in profit or loss. Some companies have also expressed concerns about the need to implement two significant changes in accounting on different dates, which will increase costs and complexity.

In September 2016, the IASB issued amendments to its existing insurance contracts standard, IFRS 4. The amendments introduced two approaches that supplement existing options in the Standard that can be used to address the temporary volatility as a result of the different effective dates of IFRS 9 and the forthcoming insurance contracts standard.

The amendments:

- provide a reporting entity (whose predominant activity is to issue insurance contracts) a temporary exemption from applying IFRS 9 until the earlier of: a) the application of IFRS 17; or b) January 1, 2021 (to be applied at the reporting entity level) (referred to as the 'temporary exemption'); and
- give entities issuing insurance contracts the option to remove from profit or loss the incremental volatility caused by changes in the measurement of specified financial assets upon application of IFRS 9 (referred to as the 'overlay approach'). This option will be in place until IFRS 17 comes into effect.

## Impact on Initial Application

The amendment to the standard might not have any impact on the Company financial statements when it becomes effective in 2021

### 3.3.8 Conceptual Framework for Financial Reporting

Purpose:- The revised Conceptual Framework for Financial Reporting (the Conceptual Framework) is not a standard, and none of the concepts override those in any standard or any requirements in a standard. The purpose of the Conceptual Framework is to assist the Board in developing standards, to help preparers develop consistent accounting policies if there is no applicable standard in place and to assist all parties to understand and interpret the standards.

Key provisions:The IASB issued the Conceptual Framework in March 2018. It sets out a comprehensive set of concepts for financial reporting, standard setting, guidance for preparers in developing consistent accounting policies and assistance to others in their efforts to understand and interpret the standards. The Conceptual Framework includes some new concepts, provides updated definitions and recognition criteria for assets and

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

liabilities and clarifies some important concepts. It is arranged in eight chapters, as follows:

- Chapter 1 The objective of financial reporting
- Chapter 2 Qualitative characteristics of useful financial information
- Chapter 3 Financial statements and the reporting entity
- Chapter 4 The elements of financial statements
- Chapter 5 Recognition and derecognition
- Chapter 6 Measurement
- Chapter 7 Presentation and disclosure
- Chapter 8 Concepts of capital and capital maintenance.

The Conceptual Framework is accompanied by a Basis for Conclusions.

The Board has also issued a separate accompanying document, Amendments to References to the Conceptual Framework in IFRS Standards, which sets out the amendments to affected standards in order to update references to the Conceptual Framework. In most cases, the standard references are updated to refer to the Conceptual Framework.

There are exemptions in developing accounting policies for regulatory account balances for two standards, namely, IFRS 3 Business Combinations and for those applying IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors

For preparers who develop accounting policies based on the Conceptual Framework, it is effective for annual periods beginning on or after 1 January 2020.

Impact The changes to the Conceptual Framework may affect the application of IFRS in situations where no standard applies to a particular transaction or event

### 3.3.9 Definition of Material (Amendments to IAS 1 and IAS 8)

The International Accounting Standards Board (IASB) has issued 'Definition of Material (Amendments to IAS 1 and IAS 8)' to clarify the definition of 'material' and to align the definition used in the Conceptual Framework and the standards themselves.

### Changes and reasoning behind the changes

The changes in Definition of Material (Amendments to IAS 1 and IAS 8) all relate to a revised definition of 'material' which is quoted below from the final amendments:

The definition of material, an important accounting concept in IFRS Standards, helps companies decide whether information should be included in their financial statements. The updated definition amends IAS 1 Presentation of Financial Statements and IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors.

The amendments are a response to findings that some companies experienced difficulties using the old definition when judging whether information was material for inclusion in the financial statements.

The amendments clarify the definition of material and how it should be applied by including in the definition guidance that until now has featured elsewhere in IFRS Standards. In addition, the explanations accompanying the definition have been improved. Finally, the amendments ensure that the definition of material is consistent across all IFRS Standards.

Information is material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the primary users of general purpose financial statements make on the basis of those financial statements,

which provide financial information about a specific reporting entity.

### Three new aspects of the new definition should especially be noted:

**Obscuring**. The existing definition only focused on omitting or misstating information, however, the Board concluded that obscuring material information with information that can be omitted can have a similar effect. Although the term obscuring is new in the definition, it was already part of IAS 1 (IAS 1.30A).

**Could reasonably be expected to influence**. The existing definition referred to 'could influence' which the Board felt might be understood as requiring too much information as almost anything 'could' influence the decisions of some users even if the possibility is remote.

**Primary users**. The existing definition referred only to 'users' which again the Board feared might be understood too broadly as requiring to consider all possible users of financial statements when deciding what information to disclose.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

The amendments are effective for annual reporting periods beginning on or after 1 January 2020.

### 3.4 Basis of measurement

This financial statements are prepared on the historical cost basis except as modified by actuarial valuation of staff gratuity and fair valuation of financial assets and liabilities where applicable. There are other assets and liabilities measured at amortised cost.

### 3.5 Use of estimates and judgements

The preparation of the company financial statements in conformity with IFRSs requires management to make judgements, estimates and assumptions that affect the application of accounting policies and the reported amounts of assets, liabilities, income and expenses. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the year in which the estimates are revised, if the revision affects only that year, or in the year of the revision and future years, if the revision affects both current and future years.

In particular, the Company has identified the following areas where significant judgements, estimates and assumptions are required. Changes in these assumptions may materially affect the financial position or financial results reported in future years. Further information on each of these areas and how they impact the various accounting policies are described below and also in the relevant notes to the financial statements.

### a) Recovery of deferred tax assets

Judgement is required to determine which types of arrangements are considered to be tax on income in contrast to an operating cost. Jugement is also required in determining whether deferred tax assets are recognised in the statement of financial position. Deferred tax assets, including those arising from un-utilised tax losses require management assessment of the likelihood that the Company will generate sufficient taxable earnings in future years in order to utilise recognised deferred tax assets. Assumptions about the generation of future taxable profits depend on management's estimates of future cash flows. These estimates of future taxable income are based on forecast cash flows from operations (which are impacted by sales volume and production, global oil prices, operating costs and capital expenditure) and judgement about the application of existing tax laws.

To the extent that future cash flows and taxable income differ significantly from estimates, the ability of the Company to realise the net deferred tax assets recorded at the reporting date could be impacted.

Future changes in tax laws could also limit the ability of the Company to obtain tax deductions in future years.

## b) Decommissioning costs

The Company may incur decommissioning cost at the end of the operating life of some of the Company's facilities and properties. The Company assesses its decommissioning provision at each reporting date. The ultimate decommissioning costs are uncertain and cost estimates can vary for various factors including changes to relevant legal requirements, emergence of new restoration techniques or experience on similar decommissioning exercise. The expected timing, extent and amount of expenditure can also change, for example in response to changes in laws and regulations or their interpretations. Therefore, significant estimates and assumptions are made in determining the provision for decommissioning. As a result, there could be significant adjustments to the provisions established which could affect future financial results.

### c) Contingencies

By their nature, contingencies will only be resolved when one or more uncertain future events occur or fail to occur. The assessment of the existence, and potential quantum, of contingencies inherently involves the exercise of significant judgement and the use of estimates regarding the outcome of future events.

# d) Estimated useful lives and residual values of intangible assets and property, plant and equipment

The Company's management determines the estimated useful lives and related depreciation charge for its items of property, plant and equipment on an annual basis. The Company has carried out a review of the residual values and useful lives of property, plant and equipment as at 30 June 2019 and that has not highlighted any requirement for an adjustment to the residual lives and remaining useful lives of the assets for the current or future periods.

### e) Impairment review

IFRS requires management to undertake an impairment test of indefinite lived assets and, for finite lived assets, to test for impairment if events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

Impairment testing is an area which involves management judgement, requiring assessment as to whether the carrying value of assets can be supported by the net present value of future cash flows derived from such assets using cash flow projections which have been discounted at an appropriate rate. In calculating the net present value of the future cash flows, certain assumptions are required to be made in respect of highly uncertain matters including management's expectations of:

- a) growth in EBITDA, calculated as adjusted operating profit before depreciation and amortisation;
- b) timing and quantum of future capital expenditure;
- c) long-term growth rates; and
- d) the selection of discount rates to reflect the risks involved.

The Company prepares and approves a formal five-year management plan for its operations, which is used in the calculation of its value in use, a long-term growth rate into perpetuity has been determined as the compound annual growth rate in EBITDA in years four to five of the management plan.

Changing the assumptions selected by management, in particular the discount rate and growth rate assumptions used in the cash flow projections, could significantly affect the Company's impairment evaluation and hence results. The Company's review includes the key assumptions related to sensitivity in the cash flow projections.

### f) Provisions for employee benefits

The actuarial techniques used to assess the value of the defined benefit plans involve financial assumptions (discount rate, rate of return on assets, medical costs trend rate) and demographic assumptions (salary increase rate, employee turnover rate, etc.). The Company uses the assistance of an external independent actuary in the assessment of these assumptions. For more details refer to note 22.

### 4. Significant accounting policies

The accounting policies set out below have been applied consistently to all years presented in this financial statements, unless otherwise indicated.

### 4.1.1 Foreign currency transactions

Transactions in foreign currencies are translated to the respective functional currencies of the entities within the Company.

Monetary items denominated in foreign currencies are re-translated at the exchange rates applying at the reporting date. Non-monetary items carried at fair value that are denominated in foreign currencies are retranslated at the rates prevailing at the date when the fair value was determined. Non-monetary items that are measured in terms of historical cost in a foreign currency are not re-translated.

Exchange differences are recognised in profit or loss in the year in which they arise except for:

- exchange differences on foreign currency borrowings which are regarded as adjustments to interest costs, where those interest costs qualify for capitalisation to assets under construction:
- exchange differences on transactions entered into to hedge foreign currency risks; and
- exchange differences on loans to or from a foreign operation for which settlement is neither planned nor likely to
  occur and therefore forms part of the net investment in the foreign operation, which are recognised initially in
  other comprehensive income and reclassified from equity to profit or loss on disposal or partial disposal of the net
  investment.

Foreign currency gains and losses on financial assets and financial liabilities are reported on a net basis.

### 4.1.2 Foreign operations

The functional currency of the parent Company and the presentation currency of the financial statements is Naira. The assets and liabilities of the Company's foreign operations are translated to Naira using exchange rates at year end. Income and expense items are translated at the average exchange rates for the year, unless exchange rates fluctuated significantly during that year, in which case the exchange rate on transaction date is used. Goodwill acquired in business combinations of a foreign operation are treated as assets and liabilities of that operation and translated at the closing rate.

Exchange differences are recognised in other comprehensive income and accumulated in a separate category of equity.

On the disposal of a foreign operation, the accumulated exchange differences of that operation, which is attributable to the Company are recognised in profit or loss.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### 4.2 Financial assets and financial liabilities

### Recognition and initial measurement

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

### Financial assets

Initial recognition and measurement of financial assets

Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income (OCI), and fair value through profit or loss.

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Company's business model for managing them. With the exception of trade receivables that do not contain a significant financing component or for which the Company has applied the practical expedient, the Company initially measures a financial asset at its fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs. Trade receivables that do not contain a significant financing component or for which the Company has applied the practical expedient are measured at the transaction price determined under IFRS 15.

In order for a financial asset to be classified and measured at amortised cost or fair value through OCI, it needs to give rise to cash flows that are 'solely payments of principal and interest (SPPI)' on the principal amount outstanding. This assessment is referred to as the SPPI test and is performed at an instrument level

The Compay's business model for managing financial assets refers to how it manages its financial assets in order to generate cash flows. The business model determines whether cash flows will result from collecting contractual cash flows, selling the financial assets, or both.

Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the market place (regular way trades) are recognised on the trade date, i.e., the date that the Company commits to purchase or sell the asset.

## Subsequent measurement

For purposes of subsequent measurement, financial assets are classified in three categories:

- Financial assets at amortised cost (debt instruments)
- Financial assets designated at fair value through OCI with no recycling of cumulative gains and losses upon derecognition (equity instruments)
- Financial assets at fair value through profit or loss (the Company however has no financial instrument in this category)

### **Debt instruments**

Subsequent measurement of debt instruments depends on the Company's business model for managing the asset and the cash flow characteristics of the asset.

There are three measurement categories into which the Company classifies its debt instruments:

# Amortised cost:

Assets that are held for collection of contractual cash flows where those cash flows represent solely payments of principal and interest are measured at amortised cost. A gain or loss on a debt investment that is subsequently measured at amortised cost and is not part of a hedging relationship is recognised in profit or loss when the asset is derecognised or impaired. Interest income from these financial assets is included in finance income using the effective interest rate method.

### Fair value through other comprehensive income (FVOCI):

Assets that are held for collection of contractual cash flows and for selling the financial assets, where the assets' cash flows represent solely payments of principal and interest, are measured at fair value through other comprehensive income (FVOCI). Movements in the carrying amount are taken through OCI, except for the recognition of impairment gains or losses, interest revenue and foreign exchange gains and losses which are recognised in profit and loss. When the financial asset is derecognised, the cumulative gain or loss previously recognised in OCI is reclassified from equity to profit or loss and recognised in other gains/(losses). Interest income from these financial assets is included in finance income using the effective interest rate method.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### Fair value through profit or loss:

Assets that do not meet the criteria for amortised cost or FVOCI are measured at fair value through profit or loss. A gain or loss on a debt investment that is subsequently measured at fair value through profit or loss and is not part of a hedging relationship is recognised in profit or loss and presented net in the profit or loss statement within other gains/(losses) in the period in which it arises. Interest income from these financial assets is included in the interest income.

### Other financial assets:

Other financial assets are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. They are presented as current assets, except for those maturing later than 12 months after the reporting date which are presented as non-current assets. These are initially recognized at fair value and subsequently measured at amortized cost using the effective interest method, less any impairment losses. These comprise trade receivables, unbilled revenues, cash and cash equivalents and other assets.

#### **Expected credit losses**

The Company applies the IFRS 9 simplified approach to measuring expected credit losses ECLs for trade receivables at an amount equal to lifetime ECLs. The ECLs on trade receivables are calculated based on actual credit loss experience over the preceding three on the total balance of non-credit impaired trade receivables.

The Company considers a trade receivable to be credit impaired when one or more detrimental events have occurred such as:

significant financial difficulty of the customer; or

it is becoming probable that the customer will enter bankruptcy or other financial reorganization.

Impairment losses related to trade and other receivables are not presented separately in the income statement but are reported under the heading, administrative expenses

### **Business model:**

The business model reflects how the Company manages the assets in order to generate cash flows. That is, whether the Company's objective is solely to collect the contractual cash flows from the assets or is to collect both the contractual cash flows and cash flows arising from the sale of assets. If neither of these is applicable (e.g. financial assets are held for trading purposes), then the financial assets are classified as part of 'other' business model and measured at fair value through profit or loss ('FVTPL"). Factors considered by the Company in determining the business model for a Company of assets include past experience on how the cash flows for these assets were collected, how the asset's performance is evaluated and reported to key management personnel, how risks are assessed and managed and how managers are compensated.

### Solely Payment of Principal and Interest (SPPI):

Where the business model is to hold assets to collect contractual cash flows or to collect contractual cash flows and sell, the Company assesses whether the financial instruments' cash flows represent solely payments of principal and interest (the 'SPPI test'). In making this assessment, the Company considers whether the contractual cash flows are consistent with a basic lending arrangement i.e. interest includes only consideration for the time value of money, credit risk, other basic lending risks and a profit margin that is consistent with a basic lending arrangement. Where the contractual terms introduce exposure to risk or volatility that are inconsistent with a basic lending arrangement, the related financial asset is classified and measured at FVTPL.

The Company reclassifies debt investments when and only when its business model for managing those assets changes. The reclassification takes place from the start of the first reporting period following the change. Such changes are expected to be very infrequent and none occurred during the period.

### **Equity instruments**

The Company subsequently measures all equity investments at fair value. Where the Company's management has elected to present fair value gains and losses on equity investments in other comprehensive income, there is no subsequent reclassification of fair value gains and losses to profit or loss. Dividends from such investments continue to be recognised in profit or loss as other income when the Company's right to receive payments is established.

Changes in the fair value of financial assets at fair value through profit or loss are recognised in other gain/(losses) in the statement of profit or loss as applicable. Impairment losses (and reversal of impairment losses) on equity

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

investments measured at FVOCI are not reported separately from other changes in fair value.

### (iv) Derecognition

A financial asset is derecognised when:

The rights to receive cash flows from the asset have expired;

The Company has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement; and either:

(a) the Company has transferred substantially all the risks and rewards of the asset, or (b) the Company has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset

When the Company has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the asset is recognised to the extent of the Company's continuing involvement in the asset. In that case, the Company also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Company has retained.

Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that the Company could be required to repay.

### **Financial liabilities**

#### Initial recognition and measurement

The Company has classified all financial liabilities within the scope of IFRS 9 under loans and borrowings and other financial liabilities as appropriate. The Company determines the classification of its financial liabilities at initial recognition.

All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and other financial liabilities, net of directly attributable transaction costs.

### Subsequent measurement

The measurement of financial liabilities depends on their classification as described below:

### Loans and borrowings

After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the Effective Interest Rate (EIR) method. Gains and losses are recognised in the income statement when the liabilities are derecognised as well as through the EIR amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the income statement.

### Derecognition

A financial liability is derecognised when the obligation under the liability is discharged or cancelled, or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the derecognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the income statement.

# Offsetting of financial instruments

Financial assets and financial liabilities are offset and the net amount is reported in the statement of financial position if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, or to realise the assets and settle the liabilities simultaneously.

## 4.2.1 Trade and other receivables

Trade receivables are stated at their original invoiced value, as the interest that would be recognised from discounting future cash receipts over the short credit year is not considered to be material. Trade receivables are reduced by appropriate allowances for estimated irrecoverable amounts. Interest on overdue trade receivables is recognised as it accrues.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

Trade and other receivables are recognised initially at their transaction price and subsequently measured at amortized cost less loss allowances.

### 4.2.3 Cash and cash equivalents

Cash equivalents comprise short-term, highly liquid investments that are readily convertible into known amounts of cash and which are subject to an insignificant risk of changes in value. An investment with a maturity of three months or less is normally classified as being short-term.

### 4.2.4 Non-derivative financial liabilities

Bank overdrafts that are repayable on demand and form an integral part of the Company's cash management are included as a component of cash and cash equivalents for the purpose of the statement of cash flows.

#### 4.2.5 Trade and other payables

Trade payables are stated at their original invoiced value, as the interest that would be recognised from discounting future cash payments over the short payment year is not considered to be material.

### 4.2.6 Loans and borrowings

### 4.2.6a Interest-bearing borrowings

Interest-bearing borrowings are stated at amortised cost using the effective interest method. The effective interest method is a method of calculating the amortised cost of a financial liability and of allocating interest expense over the relevant year. The effective interest rate is the rate that exactly discounts estimated future cash payments through the expected life of the financial liability.

#### 4.2.6b Debt instruments

Financial instruments issued by the Company are qualified as debt instruments if there is a contractual obligation to deliver cash or another financial asset to the holder of the instrument. The same applies if the Company is required to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the Company.

Issues of bonds are recorded at their initial fair value which normally reflects the proceeds received, net of direct issue costs less any repayments. Subsequently these are stated at amortised cost, using the effective interest method. Any difference between the proceeds after direct issue costs and the redemption value is recognised over the term of the borrowing in the income statement using the effective interest method.

# 4.2.7 Compound instruments

At the issue date, the fair value of the liability component of a compound instrument is estimated using the market interest rate for a similar non-convertible instrument. This amount is recorded as a liability at amortised cost using the effective interest method until extinguished upon conversion or at the instrument's redemption date.

The equity component is determined as the difference of the amount of the liability component from the fair value of the instrument. This is recognised in equity, net of income tax effects, and is not subsequently remeasured.

### 4.2.8 Investments in subsidiaries

Investments in subsidiaries are carried at cost less accumulated impairment losses in the Company's balance sheet. On disposal of investments in subsidiaries, the difference between disposal proceeds and the carrying amounts of the investments are recognised in profit or loss.

# 4.3.1 Share capital

Ordinary shares are classified as equity. Incremental costs directly attributable to the issue of ordinary shares and share options are recognised as a deduction from equity, net of any tax effects and costs directly attributable to the issue of the instrument.

### 4.3.2 Dividend distribution

Dividend distribution to the Company's shareholders is recognised as a liability in the Company's financial statements in the year in which the dividends are approved by the Company's shareholders.

Dividends which remained unclaimed for a year exceeding twelve (12) years from the date of declaration and which are no longer actionable by shareholders in accordance with Section 385 of Companies and Allied Matters Act of Nigeria, are written back to retained earnings.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

# 4.4 Property, plant and equipment

### 4.4.1 Recognition and measurement

Items of property, plant and equipment are measured at cost less accumulated depreciation and accumulated impairment losses, if any.

Cost includes expenditure that is directly attributable to the acquisition of the asset. Items of property, plant and equipment under construction are disclosed as capital work-in-progress. The cost of construction recognised includes the cost of materials and direct labour, any other costs directly attributable to bringing the assets to a working condition for the intended use, the costs of dismantling and removing the items and restoring the site on which they are located, and borrowing costs on qualifying assets.

When parts of an item of property, plant and equipment have different useful lives, they are accounted for as separate items (major components) of property, plant and equipment.

Gains and losses on disposal of an item of property, plant and equipment are determined by comparing the proceeds from disposal with the carrying amount of property, plant and equipment, and are recognised net within other income in profit or loss.

### 4.4.2 Reclassification of investment property

When the use of a property changes from owner-occupied to investment property, the property is transferred to investment properties at its carrying amount.

### 4.4.3 Subsequent costs

The cost of replacing part of an item of property or equipment is recognised in the carrying amount of the item if it is probable that future economic benefits embodied within the part will flow to the Company and its cost can be measured reliably. The costs of the day-to-day servicing of property and equipment are recognised in profit or loss

#### 4.4.4 Depreciation

Depreciation is calculated over the depreciable amount, which is the cost of an asset, or other amount substituted for cost, less its residual value.

Depreciation is recognized in profit or loss on a straight-line basis over the estimated useful life of each part of an item of property, plant and equipment which reflects the expected pattern of consumption of the future economic benefits embodied in the asset.

Leased assets are depreciated over the shorter of the lease term and their useful life unless it is reasonably certain that the Company will obtain ownership by the end of the lease term in which case the assets are depreciated over the useful life.

The estimated useful lives for the current and comparative year are as follows:

Land Over lease year
Buildings 25 years
Building improvements 5 years
Plants, equipment and tanks 5-20 years
Furniture and fittings 4 years
Computer equipment 3 years
Motor vehicles 5-8years

Depreciation methods, useful life and residual values are reviewed at each financial year end and adjusted, if appropriate. Capital work-in-progress is not depreciated. The attributable cost of each asset is transferred to the relevant asset category immediately the asset is available for use and depreciated accordingly.

# 4.5 Investment property

Investment properties are measured at cost less accumulated depreciation and accumulated impairment losses, if any. Cost includes expenditure that is directly attributable to the acquisition of the property. Investment properties under construction are disclosed as capital work-in-progress. The cost of construction recognised includes the cost of materials and direct labour, any other costs directly attributable to bringing the property to a condition of commercial lease to third parties.Land held for an undefined future use is recognised as investment property.

Property that is being constructed or developed for future use as investment property is recognised as investment property.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

Depreciation is calculated over the depreciable amount, which is the cost of a property, or other amount substituted for cost, less its residual value. Depreciation is recognised on a straight - line basis over the useful life of the investment property.

The estimated useful lives for the current and comparative year are as follows:

Land Over lease year

Buildings 25 years

The criteria used by the Company to distinguish investment property from owner occupied property are as follows:

- The property must not be actively used for the running of the core business activity of the Company that is, production and marketing of petroleum products.
- The property generates cash flows which have no direct connection with core business activity of the Company.
- The property is held primarily for rental income generation and/or value appreciation.

### 4.6 Intangible assets

### 4.6.1 Intangible assets acquired separately

Intangible assets acquired separately are shown at historical cost less accumulated amortisation and impairment losses.

Amortisation is charged to profit or loss on a straight-line basis over the estimated useful lives of the intangible assets unless such lives are indefinite. These charges are included in other expenses in profit or loss.

Intangible assets with an indefinite useful life are tested for impairment annualy. Other intangible assets are amortised from the date they are available for use. The estimated useful live for the current and comparative year is:

Software costs - 3 to 8 years

Amortisation years and methods are reviewed annually and adjusted if appropriate.

### 4.6.2 Intangible assets generated internally

Expenditures on research or on the research phase of an internal project are recognised as an expense when incurred. The intangible assets arising from the development phase of an internal project are recognised if, and only if, the following conditions apply:

- it is technically feasible to complete the asset for use by the Company;
- the Company has the intention of completing the asset for either use or resale;
- the Company has the ability to either use or sell the asset;
- it is possible to estimate how the asset will generate income;
- the Company has adequate financial, technical and other resources to develop and use the asset; and
- the expenditure incurred to develop the asset is measurable.

If no intangible asset can be recognised based on the above, then development costs are recognised in profit and loss in the year in which they are incurred.

### 4.6.3 Intangible assets recognised in a business combination

Intangible assets acquired in a business combination and recognised separately from goodwill are initially recognised at their fair value at the acquisition date.

# 4.6.4 Subsequent expenditure

Subsequent expenditure on software assets is capitalised only when it increases the future economic benefits embodied in the specific asset to which it relates. All other expenditure is expensed as incurred.

## 4.6.5 Amortisation

Amortisation is calculated over the cost of the asset, or other amount substituted for cost, less its residual value.

Amortisation is recognised in profit or loss on a straight - line basis over the estimated useful lives of intangible assets from the date that they are available for use, since this must closely reflect the expected pattern of consumption of the future economic benefits embodied in the asset. The estimated useful life for the current and comparative year is:

Computer software: 3 to 8 years

Amortisation methods, useful lives and residual values are reviewed at each financial year end and adjusted if appropriate.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### 4.7 Leases

Leases are classified as finance leases whenever the terms of the lease transfer substantially all the risks and rewards of ownership to the Company. All other leases are classified as operating leases.

#### 4.7.1 Finance leases

Assets held under finance leases are recognised as assets of the Company at the fair value at the inception of the lease or if lower, at the present value of the minimum lease payments. The related liability to the lessor is included in the statement of financial position as a finance lease obligation.

Lease payments are apportioned between interest expenses and capital redemption of the liability. Interest is recognised immediately in profit or loss, unless attributable to qualifying assets, in which case they are capitalised to the cost of those assets.

Contingent rentals are recognised as expense in the year in which they are incurred.

### 4.7.2 Operating leases

Operating lease payments are recognised as an expense on a straight-line basis over the lease term, except if another systematic basis is more representative of the time pattern in which economic benefits will flow to the Company.

Contingent rentals arising under operating leases are recognised in the year in which they are incurred. Lease incentives and similar arrangements of incentives are taken into account when calculating the straight-lined expense.

#### 4.8 Borrowing costs

Borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are capitalised as part of the cost of that asset. Other borrowing costs are expensed in the year in which they are incurred.

#### 4.9 Taxation

Income tax for the year is based on the taxable income for the year. Taxable income differs from profit as reported in the statement of comprehensive income for the year as there are some items which may never be taxable or deductible for tax and other items which may be deductible or taxable in other years.

The Company offsets the tax assets arising from withholding tax credits and current tax liabilities if, and only if, the entity has a legally enforceable right to set-off the recognised amounts, and it intends to either settle on a net basis, or to realise the asset and settle the liability simultaneously. The tax asset is reviewed at each reporting date and written down to the extent that it is no longer probable that future economic benefit would not be realised.

Deferred tax is the future tax consequences of temporary differences between the carrying amounts and tax bases of assets and liabilities shown on the statement of financial position. Deferred tax assets and liabilities are not recognised if they arise in the following situations: the initial recognition of goodwill; or the initial recognition of assets and liabilities that affect neither accounting nor taxable profit. The amount of deferred tax provided is based on the expected manner of recovery or settlement of the carrying amount of assets and liabilities, using tax rates enacted or substantially enacted at the statement of financial position date.

associated with investments in subsidiaries, joint ventures and associates where the parent Company is able to control the timing of the reversal of the temporary differences and it is not considered probable that the temporary differences will reverse in the foreseeable future. It is the Company's policy to reinvest undistributed profits arising in Company companies.

A deferred tax asset is recognised only to the extent that it is probable that future taxable profits will be available against which the asset can be utilised.

Deferred tax assets are recognised for unused tax losses, unused tax credits and deductible temporary differences to the extent that it is probable that future taxable profits will be available against which they can be used. Future taxable profits are determined based on the reversal of relevant taxable temporary differences. If the amount of taxable temporary differences is insufficient to recognise a deferred tax asset in full, then future taxable profits, adjusted for reversals of existing temporary differences, are considered, based on the business plans approved by the board for the Company.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realised; such reductions are reversed when the probability of future taxable profits improves. Unrecognised deferred tax assets are reassessed at each reporting date and recognised to the extent that it has become probable that future taxable profits will be available against which they can be used.

Deferred tax is measured at the tax rates that are expected to be applied to temporary differences when they reverse, using tax rates enacted or substantively enacted at the reporting date. The measurement of deferred tax reflects the tax consequences that would follow from the manner in which the Company expects, at the reporting date, to recover or settle the carrying amount of its assets and liabilities.

Deferred tax assets and liabilities are offset only if certain criteria are met.

#### 4.10 Inventories

Inventories are measured at the lower of cost and net realisable value. The cost of deregulated inventories - AGO, ATK, LPFO is based on the weighted average cost principle, and includes expenditure incurred in acquiring the inventories, production or conversion costs and other costs incurred in bringing them to their existing location and condition. The cost of regulated inventories - PMS and DPK is based on the standard cost principle. In the case of manufactured inventories and work in progress, cost includes an appropriate share of production overheads based on normal operating capacity.

Packaging Materials, Solar inverters, Lubricants, and Greases are valued based on Weighted Average Cost. Inventories -in-transit are valued based on purchase cost incurred to date.

Perpetual inventory system where cost of sales and ending inventory is updated continuously is in use.

Net realisable value is the estimated selling price in the ordinary course of business, less the estimated costs of completion and selling expenses.

The production costs comprise direct materials, direct labour and an appropriate proportion of manufacturing fixed and variable overheads.

Allowance is made for obsolete, slow moving or defective items where appropriate.

### Spare parts and consumables

Spare parts which are expected to be fully utilized in production within the next operating cycle and other consumables are valued at weighted average cost.

### 4.11 Impairment

## 4.11.1 Impairment of financial assets

The Company recognises an allowance for Expected Credit Losses (ECLs) for all debt instruments not held at fair value through profit or loss. ECLs are based on the difference between the contractual cash flows due in accordance with the contract and all the cash flows that the Company expects to receive, discounted at an approximation of the original effective interest rate. The expected cash flows will include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms

ECLs are recognised in two stages. For credit exposures for which there has not been a significant increase in credit risk since initial recognition, ECLs are provided for credit losses that result from default events that are possible within the next 12-months (a 12-month ECL). For those credit exposures for which there has been a significant increase in credit risk since initial recognition, a loss allowance is required for credit losses expected over the remaining life of the exposure, irrespective of the timing of the default (a lifetime ECL).

For trade receivables and contract assets, the Company applies a simplified approach in calculating ECLs. Therefore, the Company does not track changes in credit risk, but instead recognises a loss allowance based on lifetime ECLs at each reporting date. The Company has established a provision matrix that is based on its historical credit loss experience, adjusted for forward-looking factors specific to the debtors and the economic environment.

The Company considers a financial asset in default when contractual payments are 60 days past due. However, in certain cases, the Company may also consider a financial asset to be in default when internal or external information indicates that the Company is unlikely to receive the outstanding contractual amounts in full before taking into account any credit enhancements held by the Company. A financial asset is written off when there is no reasonable expectation of recovering the contractual cash flows.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### 4.11.2 Non-financial assets

The carrying amounts of the Company's non-financial assets, other than inventories and deferred tax assets are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists, then the asset's recoverable amount is estimated. For intangible assets that have indefinite useful lives or that are not yet available for use, the recoverable amount is estimated each year at the same time.

The recoverable amount of an asset is the greater of its value in use and its fair value less costs to sell. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset.

An impairment loss is recognised if the carrying amount of an asset exceeds its recoverable amount.

An impairment loss in respect of goodwill is not reversed. In respect of other assets, impairment losses recognized in prior years are assessed at each reporting date for any indications that the loss has decreased or no longer exists. An impairment loss is reversed if there has been a change in the estimates used to determine the recoverable amount. An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortization, if no impairment loss had been recognised.

#### 4.12 Employee benefits

The Company operates both defined contribution plans and defined benefit plans.

#### 4.12.1 Defined benefit plan

A defined benefit plan is a post-employment benefit plan other than a defined contribution plan. The Company's net obligation in respect of defined benefit post-retirement plans is calculated separately for each plan by estimating the amount of future benefit that employees have earned in return for their service in the current and prior years; that benefit is discounted to determine its present value and any unrecognised past service costs and the fair value of any plan assets are deducted. The discount rate is the yield at the reporting date on government bonds that have maturity dates approximating the terms of the Company's obligations and that are denominated in the same currency in which the benefits are expected to be paid.

The calculation is performed annually by a qualified actuary using the projected unit credit method. When the calculation results in a benefit to the Company, the recognised asset is limited to the total of any unrecognised past service costs and the present value of economic benefits available in the form of any future refunds from the plan or reductions in future contributions to the plan. In order to calculate the present value of economic benefits, consideration is given to any minimum funding requirements that apply to any plan in the Company. An economic benefit is available to the Company if it is realisable during the life of the plan, or on settlement of the plan liabilities.

When the benefits of a plan are improved, the portion of the increased benefit related to past service by employees is recognised in profit or loss on a straight-line basis over the average year until the benefits become vested. To the extent that the benefits vest immediately, the expense is recognised immediately in profit or loss.

### 4.12.2 Defined contribution plan

A defined contribution plan is a post-employment benefit plan under which an entity pays fixed contributions into a separate entity and will have no legal or constructive obligation to pay further amounts. Obligations for contributions to defined contribution pension plans are recognised as an employee benefit expense in profit or loss in the year during which services are rendered by employees. In relation to the defined contribution plan, the Company has in place the Pension fund scheme.

# 4.12.3 Pension fund scheme

In accordance with the revised provisions of the Pension Reform Act, 2014, the Company has instituted a Contributory Pension Scheme for its employees, where both the employees and the Company contribute 8% and 10% respectively of the employee's emoluments (basic salary, housing and transport allowances). The Company's contribution under the scheme is charged to the profit and loss account while employee contributions are funded through payroll deductions.

# 4.12.4 Terminal benefit

Termination benefits are recognised as an expense when the Company is committed demonstrably, without realistic possibility of withdrawal, to a formal detailed plan to either terminate employment before the normal retirement date, or to provide termination benefits as a result of an offer made to encourage voluntary redundancy. Termination benefits for voluntary redundancies are recognised as an expense if the Company has made an offer of voluntary redundancy, it is probable that the offer will be accepted, and the number of acceptances can be estimated reliably. If benefits are payable more than 12 months after the reporting year, then they are discounted to their present value.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### 4.12.5 Short term benefits - Profit-sharing and bonus plans

This recognises a liability and an expense for bonuses and profit-sharing, based on a formula that takes into consideration the profit attributable to Forte's shareholders after certain adjustments. the recognises a provision where contractually obliged or where there is a past practice that has created a constructive obligation.

### 4.13 Provision, contingencies and decommissioning costs

### 4.13.1 Provisions

A provision is recognised if, as a result of a past event, the Company has a present legal or constructive obligation that can be estimated reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation.

Provisions for environmental restoration, restructuring costs and legal claims are recognised when: the Company has a present legal or constructive obligation as a result of past events; it is probable that an outflow of resources will be required to settle the obligation; and the amount has been reliably estimated. Restructuring provisions comprise lease termination penalties and employee termination payments. Provisions are not recognised for future operating losses.

Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. A provision is recognised even if the likelihood of an outflow with respect to any one item included in the same class of obligations may be small.

Provisions are measured at the present value of the expenditures expected to be required to settle the obligation using a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the obligation. The increase in the provision due to passage of time is recognised as interest expense.

### 4.13.2 Contingent liabilities

Contingent liabilities are possible obligations whose existence will only be confirmed by future events not wholly within the control of the Company. Contingent liabilities are not recognised in the financial statements but are disclosed. However if the possibility of an outflow of economic resources is considered remote, such contigent liabilities are recognised in the financial statements.

### 4.13.3 Contingent assets

Contingent assets are possible assets that arise from past events whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity. Contigent assets are only disclosed when an inflow of economic benefit is probable. Asset is recognised when the realisation of income is virtually certain, in which case the related asset is no more contingent.

### 4.13.4 Decommissioning costs

Liabilities for decommissioning costs are recognised when the Company has an obligation to dismantle and remove a facility or an item of property, plant or equipment and to restore the site on which it is located, and when a reliable estimate of the liability can be made. Where an obligation exists for a new facility such as a retail outlet, this will be on construction. An obligation for decommissioning may also crystalize during the year of operation of a facility through a change in legislation or through a decision to terminate operations. The amount recognised is the present value of the estimated future expenditure determined in accordance with local conditions and requirements. A corresponding item of property, plant and equipment of an amount equivalent to the provision is also recognised. This is subsequently depreciated as part of the asset.

Other than the unwinding discount on the provision, any change in the present value of the estimated expenditure is reflected as an adjustment to the provision and the corresponding item of property, plant and equipment.

### 4.14 Models used for impairment test, valuations, actuarial results

The new impairment requirements in IFRS 9 are based on an expected credit loss model and replaces the IAS 39 incurred loss model. The expected credit loss model applies to debt instruments (such as bank deposits, loans, debt securities and trade receivables) recorded at amortised cost or at fair value through other comprehensive income, plus lease receivables, contract assets and loan commitments and financial guarantee contracts that are not measured at fair value through profit or loss. The guiding principle of the expected credit loss model is to reflect the general pattern of deterioration or improvement in the credit quality of financial instruments.

In line with the requirements of IFRS 9, the Company recognize losses on all receivables including receivables that are not past due. i.e it is no longer necessary for a credit event to have occurred before credit losses are recognized. The Company calculates expected credit losses on trade receivables using a provision matrix based on historical, current and forecasted credit conditions. All receivables are computed based on different customer attributes and different historical loss patterns.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

The Company's trade receivables by their nature do not include a significant financing component, they are measured at transaction price and do not have a contractual interest rate. Thus the Effective Interest Rate (EIR) would be zero (0). As a result of this, the discounting of cash shortfalls when measuring our ECL would not be required. The following approach is adopted by the Company in determining the expected credit loss on all receivables. In line with the requirements of IFRS 9, all receivables have an ECL provision, including receivables that are not past due.

Default based on our internal rating system is considered after 60days. All receivables are categorized based on the ageing of the receivables, associated risk rating and the impairment allowance relative to the risk class as analyzed below. All receivables with credit balances have no associated risk. Also, receivables that are not past due have a risk rating of 1. In determining historical default rate, we considered internal rating over a prior period of three years for the trade receivables and compared with the rating as at reporting date. This was used to determine if there had been a significant increase in credit risk (SICR).

The Company considers forward-looking information using reasonable and supportable forecasts of future economic conditions that is available without undue cost or effort. We considered inflation rate and GDP growth rate as the macro-economic factors that influence the default rate. The historical default rate is adjusted with the forecasts of future economic condition to arrive at a credit loss rate.

#### Non-financial assets

The carrying amounts of the Company's non-financial assets, other than inventories and deferred tax assets are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists, then the asset's recoverable amount is estimated. For intangible assets that have indefinite useful lives or that are not yet available for use, the recoverable amount is estimated each financial year at the same time.

The recoverable amount of an asset is the greater of its value in use and its fair value less costs to sell. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset.

# 4.15 Revenue from contract with customers

# Revenue from sale of petroleum products, Aviation Turbine Kerosene, lubricants and greases, and solar panel

Revenue arises mainly from the sale of petroleum products (white products), Aviation Turbine Kerosene (ATK), lubricants and greases, and solar panel.

To determine whether to recognise revenue, the Company follows a 5-step process:

- 1 Identifying the contract with a customer
- 2 Identifying the performance obligations
- 3 Determining the transaction price
- 4 Allocating the transaction price to the performance obligations
- 5 Recognising revenue when/as performance obligation(s) are satisfied.

The transaction price for a contract excludes any amounts collected on behalf of third parties. Customers obtain control of products when the products are delivered to and have been accepted and revenue is recognised at that point in time. Invoices are usually payable within 30days.

### 4.15.1 Rental income

Rental income from investment property is recognised as revenue on a straight-line basis over the term of the lease. Lease incentives granted are recognised as an integral part of the total rental income, over the term of the lease. Rental income from other property is recognised as other income.

### 4.15.2 Throughput income

Throughput income represents fees earned from the use of the Company's storage facilities by third parties on one hand and the Nigerian National Petroleum Corporation product discharge into these storage facilities. These are recognised as other income.

### 4.16 Finance, dividend income and finance cost.

# 4.16.1 Finance and dividend income

Finance income comprises interest income on funds invested, credit bank balances, reimbursement of any foreign loss and /or interest from Petroleum Product Pricing Regulatory Agency (PPPRA). Interest income is recognised using the effective interest method. When a loan and receivable is impaired, the Company reduces the carrying amount to its recoverable amount, being the estimated future cashflow discounted at the original effective interest rate of the instrument, and continues unwinding the discount as interest income. Interest income on impaired loan and receivables recognised using the original effective interest rate. Dividend income is recognised in profit or loss on the date that the Company's right to receive payment is established.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### 4.16.2 Finance cost

Finance costs comprises interest expense on borrowings.

Borrowing costs that are not directly attributable to the acquisition, construction or production of a qualifying asset are recognised in profit or loss using the effective interest method.

#### 4.17 Earnings per share

The Company presents basic/diluted earnings per share data for its ordinary shares.

Basic earnings per share is calculated by dividing the profit or loss attributable to ordinary shareholders of the Company by the weighted average number of ordinary shares outstanding during the year, adjusted for own shares held.

Diluted earnings per share adjusts the figures used in the determination of Basic earnings per share to take into account the weighted average number of additional shares that would have been outstanding assuming the conversion of all dilutive potential ordinary shares.

### 4.18 Segment reporting

An operating segment is a component of the Company that engages in business activities from which it may earn revenues and incur expenses. Segment results that are reported to the Company's CEO (the chief operating decision maker) include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items comprise mainly of head office expenses, and tax assets and liabilities.

### 4.19 Petroleum subsidies

Petroleum Products Pricing Regulatory Agency (PPPRA) subsidises the cost of importation of certain refined petroleum products whose prices are regulated in the Nigerian market. The subsisidies are recognised when there is reasonable assurance that they will be recovered and the Company has complied with the conditions attached to receiving the subsidy. The subsidies are recognised as a reduction to the landing cost of the subsidised petroleum product.

### 4.20 Trade and other receivables

The fair value of trade and other receivables is estimated as the present value of the future cash flows, and discounted at market rates of interest at the reporting date. For trade and other receivables with a remaining life of less than one year, the notional amount is deemed to reflect the fair value.

Fair value which is determined for disclosure purposes, is calculated based on the present value of future principal and interest cash flows, discounted at market rates of interest at the reporting date. For trade and other creditors with a remaining life of less than one year, the notional amount is deemed to reflect the fair value.

### 4.21 Effective interest method

The effective interest method is a method of calculating the amortised cost of a financial instrument and of allocating interest income or expense over the relevant year. The effective interest rate is the rate that exactly discounts estimated future cash receipts or payments (including all fees on points paid or received that form an integral part of the effective interest rate, transaction costs and other premiums or discounts) through the expected life of the financial instrument, or where appropriate, a shorter year. Income and expense is recognised on an effective interest basis for debt instruments other than those financial instruments "at fair value through profit or

# 4.22 Offsetting financial assets and liabilities

Financial assets and liabilities are offset and the net amount presented in the statement of financial position when, and only when, the Company has a legal right to offset the amounts and intends either to settle on a net basis or to realise the asset and settle the liability simultaneously.

### 4.23 Repurchase and reissue of share capital (Treasury shares)

When share capital recognised as equity is repurchased, the amount of the consideration paid, which includes directly attributable costs, net of any tax effects, is recognised as deduction from equity. Repurchased shares are classified as treasury shares and are presented in the reserve for own shares. When treasury shares are sold or reissued subsequently, the amount received is recognised as an increase in equity, and the resulting surplus or deficit on the transaction is presented in share premium.

### 4.24 Statement of cash flows

The statement of cash flows is prepared using the indirect method. Changes in items in the statement of financial position that have not resulted in cash flows have been eliminated for the purpose of preparing the statement. Dividends paid to ordinary shareholders are included in financing activities. Finance cost is also included in financing activities while finance income received is included in investing activities.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

# 4.25 Related parties

Related parties include the holding Company and other Company entities. Directors, their close family members and any employee who is able to exert a significant influence on the operating policies of the Company, are also considered to be related parties. Key management personnel are also regarded as related parties. Key management personnel are those persons having authority and responsibility for planning, directing and controlling the activities of the entity, directly or indirectly, including any director (whether executive or otherwise) of that entity.

### 4.26 Event occurring after the balance sheet date

The value of asset and liabilities at the balance sheet date are adjusted if there is evidence that subsequent adjusting event warrant a modification of these values. These adjustment are made up to the date of approval of the financial statements by the Board of Directors.

Other non-adjusting event are disclosed in the notes.

### 5. Determination of fair values

A number of Company's accounting policies and disclosures require the determination of fair value, both for financial and non financial assets and liabilities. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, regardless of whether that price is directly observable or estimated using another valuation technique. In estimating the fair value of an asset or a liability, the Company takes into account the characteristics of the asset or liability that market participants would take into account when pricing the asset or liability at the measurement date. Fair value for measurement and/or disclosure purposes in this and separate financial statements is determined for measurement and / or disclosures purposes based on the following methods.

When applicable, further information about the assumptions made in determining fair values is disclosed in the notes specific to that asset or liability.

### 6. Financial risk management

#### Overview

Our risk management objective is to ensure sustainable business growth with stability by promoting a pro-active approach in identifying, evaluating, mitigating and reporting risks associated with the business. In order to achieve these objective, we have established a structured and disciplined approach to Risk Management, including the development of the Risk Matrix, in order to guide decisions of the Company on risk related issues. The Company has a risk management system embedded in our day to day business activities which guides our business operations and is being followed in a consistent and systematic manner to increase value to our shareholders. Our Enterprise Risk Management framework focuses on enterprise wide risk of the Company with the objective to protect and enhance each entity's value and by extension the Company's value.

# **Risk Management framework**

The Board of Directors sets our overall risk appetite, approve the risk management strategy and is ultimately responsible for the effectiveness of the risk management process and system of internal control within the Company.

Specific objectives of the Company's Risk Management framework are:

- To ensure that all the current and future material risk exposures of the Company are identified, assessed, quantified, appropriately mitigated and managed.
- To establish a framework for the Company's risk management process and to ensure Company-wide implementation.
- To ensure systematic and uniform assessment of risks related with the Company's operations.
- To reduce operational surprises and losses.
- To enable compliance with appropriate regulations, wherever applicable, through the adoption of best practices.
- To assure business growth with financial stability.

The Board oversees risk management through the following Committees:

### **Board Risk Management Committee**

The Board Risk Management Committee is responsible for developing and monitoring the Company's risk management policies which are established to identify and analyse the risks faced by the Company, to set appropriate risk limit and controls, monitor risks and adherence to risk limits. The Committee ensures that risk management policies are integrated into the Company's culture. The Committee also reviews quarterly risk management reports and direct appropriate actions to be taken by senior management. The committee reports quarterly to the Board of Directors on its various activities.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### **Statutory Audit Committee**

The Audit Committee oversees how management monitors compliance with the Company's risk management policies and procedures, and reviews the adequacy of the risk management framework in relation to the risks faced by the Company.

### **Corporate Governance and Remuneration Committee**

The Corporate Governance and Remuneration Committee assists the Board in fulfilling its responsibilities in relation to Corporate Governance & remuneration matters. It ensures the Company meets all legal and regulatory requirements for business operations, thus protecting the Company from incurring operational and reputational liabilities that can affect the achievement of our goals and objectives.

### **Risk Management Committee**

The Risk Management Committee is a Management Committee of the Company which evaluates the risks inherent within the business and ensures that they are captured appropriately within the business risk profile. The committee monitors residual risk exposures and provides assurance as to adequacy of controls implemented to manage risks to the agreed level of appetite. The committee meets monthly, however risk reports are provided quarterly to the Board Risk Committee. Principal risk events are however escalated immediately.

### **Credit Risk Management Committee**

The Credit Risk Management Committee is a Sub-Committee of the Risk Management Committee that assesses the credit risk of the Company. The Committee reviews and approves credit request in line with the Company's credit policy.

The committee also meets at least monthly to review payment performance of credit customers, the adequacy of Bank Guarantees, credit limits of customers and also take appropriate actions to ensure zero tolerance for bad debts

#### **Risk Management Structure & Governance**

\* Operational manages the Company's risks by implementing and maintaining effective internal control procedures on a day-to-day basis.

- \* The Risk Management department collaborates with operational management to develop and monitor processes and controls to mitigate identified risks.
- \* They facilitate risk assessment sessions, develop risk management programs and alert management to emerging issues and changing risk scenarios.

\* Independent assurance of the effectiveness of the risk management process and methodology

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### **Risk Profile**

In the course of our daily operations, we are exposed to various risks. The Company has a risk management function that manages these risks with various reporting done as required. We have categorised the risks into the following:

Operational Risk

**HSE Risk** 

Financial Risk

Credit risk

Liquidity risk Market risk Capital risk management

Reputational Risk Strategic Risk

#### **Operational Risk**

Operational risk is the risk of direct or indirect loss arising from a wide variety of causes associated with the Company's processes and controls, personnel, technology and infrastructure, and from external factors other than credit, market and liquidity risks such as those arising from legal and regulatory requirements and generally accepted standards of corporate behaviour. Operational risks arise from all of the Company's operations.

The Company's objective is to manage operational risk to be within its risk appetite thus ensuring that the overall control processes and procedures do not restrict initiative and creativity. The primary responsibility for the development and implementation of controls to address operational risk is assigned to senior management within each business unit. This responsibility is supported by the development of overall Company standards for the management of operational risk in the following areas:

- Requirements for appropriate segregation of duties, including the independent authorization of transactions/processes.
- Requirements for the reconciliation and monitoring of transactions.
- Compliance with regulatory and other legal requirements.
- Documentation of controls and procedures.
- Requirements for the yearly assessment of operational risks faced, and the adequacy of controls and procedures to address the risks identified.
- Requirements for the reporting of operational losses and proposed remedial action.
- Development of contingency plans.
- Training and professional development.
- Ethical and business standards.
- Risk mitigation approach such as adequate insurance cover on the assets of the Company.

The Operational risk of the Company is identified and monitored through risk management review of operational processes and procedures across departments with the use of Risk Management tool kit such as Risk registers, Control Self- Assessments, Top 25 Risk of the business and Key Risk Indicators Review.

Compliance with the Company's operating standards is also supported by a programme of yearly reviews undertaken by Business Assurance(BA). The results of BA's reviews are discussed with the management of the business unit while the summaries are submitted to the Audit Committee and Executive Management of the Company.

### **HSE Risk**

The Company is committed to managing a Health, Safety & Environmental system that promotes a safe working environment for all employees, contractors, customers and visitors to our sites. At the Company, Health and Safety has equal importance with all other business activities.

It is the policy of the Company to carry out its activities in a manner that guarantees health and safety of its workers and other stakeholders, the protection of the Company's facilities and the environment and compliance with all regulatory and industry requirements. We consider health, safety and environmental issues as important as our core businesses and assume the responsibility of providing healthy, safe and secure work environment for our workers as required by law.

Our objective is to minimize the number of cases of occupational accidents, illnesses, damage to property and environmental degradation. 36 incidents were reported by various staff from different departments at different locations in the 6 months 2019 period, while 72 incidents were reported in 2018

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

### **Financial Risk**

The Company's overall risk management focuses on the unpredictability of financial markets and the adverse effect on the Company's financial and operational performance. The Company has a risk management function that manages the financial risks relating to the Company's operations under the policies approved by the Board of Directors.

The Company has exposure to the following risks from its use of financial instruments:

Credit Risk Liquidity Risk

Market Risk

Foreign Exchange Risk

Currency Risk

Interest Rate Risk

Other Market Risk

### **Credit Risk**

Credit risk refers to the risk that a counterparty will default on its contractual obligations resulting in financial loss to the Company. The Company has a policy of only dealing with creditworthy customers as a means of mitigating the risk of financial loss from defaults. We also secure our credits with Bank Guarantees from Company selected Banks.

The Company uses other publicly available financial information and its own trading records to evaluate its major customers using the Credit Application . All credits are administered in line with the company's Credit policy. Warning signs for default are promptly identified based on our Credit Management & Reporting tools. Mitigating actions such as reduced credit term, aggressive cash collection and downward review of credit limits are highlighted and implemented for high-risk customers based on approval by Executive Management and Management Credit Committee.

### Trade and other receivables

The Company has established a credit policy under which each new customer is analysed individually for creditworthiness. Credit limit is established for each customer, which represents the maximum exposure to the customer. These limits are reviewed annually by management credit committee based on customer's performance and credit worthiness. Customers that fail to meet the Company's credit criteria may transact with the Company on a cash-and-carry basis or provide a Bank Guarantee.

Our exposure to credit risk for trade and other receivables and related impairment losses at the reporting date is as disclosed in note 19.

# Allowance for impairment losses

The Company establishes an allowance for impairment that represents its estimate of expected credit losses in respect of trade and other receivables. Please refer to Note 26 for the ageing of trade and other receivables and related impairment allowances for the Company at the reporting date. The historical provision rates are updated with current and forward looking information

The model used for impairment is explained in note 4.14 above

### Investments

The Company actively monitors the credit rating of companies and only invest in liquid securities with companies with high credit ratings. The Company does not expect any counterparty to fail to meet its obligations.

### Guarantees

The Company's policy is to provide financial guarantees only to subsidiaries after a careful review of the underlying transaction. Where the underlying transaction does not meet the Company's risk appetite, such transactions are exited.

## **Liquidity Risk**

Liquidity risk is the risk that the Company will encounter difficulty in meeting the obligations associated with its financial liabilities that are settled by delivering cash or another financial asset. The Company's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions, without incurring unacceptable and avoidable losses or risking damage to the Company's reputation. Cash flow projection is performed by the treasury unit of the Company to anticipate the cash & liquidity requirements of the Company.

# NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE, 2019

The Company has a clear focus on ensuring sufficient access to capital to finance growth and to refinance maturing debt obligations. As part of the liquidity management process, the Company has various credit arrangements with some banks and related parties which can be utilised to meet its liquidity requirements.

The Company manages its liquidity process by:

- Day to day funding, managed by monitoring future cash flows to ensure that requirements can be met.
- Monitoring balance sheet liquidity ratios against internal requirements.
- Managing the concentration and debt profile.
- Usage of overdraft facility to meet liquidity needs.

Lastly, the Company ensures that it has sufficient cash on demand to meet expected operational expenses for a year of 365 days, including the servicing of financial obligations; this excludes the potential impact of extreme circumstances that cannot reasonably be predicted, such as natural disasters.

#### **Market Risk**

Market risk is the risk that changes in market prices, such as foreign exchange rates, interest rates and equity prices will affect the Company's income or the value of its holdings of financial instruments. The objective of market risk management is to manage and control market risk exposures within acceptable parameters, while optimizing the return.

### Foreign Exchange Risk

The foreign exchange (FX) risk management policy shall be considered in all FX transactions. This policy provides guidelines on how foreign exchange risk is managed. The sources of FX risk include Imports of all petroleum products for sale e.g PMS, AGO, Base Oil and ATK, FX denominated operating expenses, Receivables denominated in currency other than the base currency.

### **Currency Risk**

The currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to the changes in foreign exchange rates.

The Company is exposed to currency risk on sales, purchases and borrowings that are denominated in a currency other than its functional currency. The Company is exposed primarily to US Dollars (USD), Euro (E), Pound Sterling (GBP) and Ghanian Cedis (GHC).

The Company monitors the movement in currency rates on an ongoing basis to mitigate the risk that the movements in the exchange rates may adversely affect the Company's income or value of their financial instruments.

The Company is allowed to hedge currency exposure within the tolerable limit by bank and must be approved by Risk Management Committee. The Company does not hedge for speculative reasons.

Interest on borrowings is denominated in the currency of the borrower. Generally, borrowings are denominated in currencies that match the cash flows generated by the underlying operations of the Company, primarily Naira, also GHC and USD. This provides an economic hedge without derivatives being entered into and therefore hedge accounting is not applied in these circumstances.

## NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE 2019

# Operating segment

The Company has three reportable segments, as described below, which are the Company's strategic business units. The strategic business units offer different products, and are managed separately. For each of the strategic business units, the Company's CEO reviews internal management reports on at least monthly basis. The following summary describes the operations in each of the Company's reportable segments.

Segment	Description
Fuels	This segment is responsible for the sale and distribution of petroleum products (white products) and Aviation Turbine Kerosene (ATK) in retail outlets and to industrial customers.
Lubricants and Greases	This segment manufactures and sells lubricants and greases.
Solar system	This segment sells solar system .

As at 31 March 2019, the subsidaries Forte Upstream Services, AP Oil and Gas- Ghana and Amperion Power Distribution Company Limited, which had been previously classified as held for sale at the end of June 2018, were disposed of. Details of the profit or loss from disposal has been included in Note 8.5

The accounting policies of the reportable segments are the same as described in notes 2 to 5. Information regarding the results of each reportable segment is included below:

## NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE 2019

`		30-Jun-19 N'000
14.	Investment property	
	Cost	
	Balance at 1 January	2,235,584
	Balance at 30 June 2019	2,235,584
	Depreciation	
	Balance at 1 January	703,589
	Charge for the period	12,724
	Balance at 30 June 2019	716,313
	Carrying amount	
	At 1 January	1,531,995
	At 30 June 2019	1,519,271

- (a) Investment property comprises of a number of commercial properties that are leased to third parties. The lease year ranges between 1 5 years. Investment properties are carried at cost/deemed cost. The carrying amount of investment property is separated between lease hold land and buildings. Lease hold land is amortised over the lease year while building is depreciated on a straight line basis over the estimated useful life at 4% per annum.
- **(b)** During the period ended 30 June 2019 the Company recognised N149,909,000 (June 2018 : N69,848,000) as rental income in statement of profit or loss.
- **(c)** Depreciation charge of N12,724,000 (2018 : N12,724,000) is included in administrative expenses in the statement of profit or loss and other comprehensive income.
- (d) The fair value of the investment properties as at 30 June 2018 was N5,251,786,900. The fair valuation was carried out by Jide Taiwo & Co. (FRC2012/NIESV/000000254); Ismail & Partners (FRC/2012/NIESV/0000000245) and Dele Olaiya & Associates (FRC/2013/NIESV/00000002773). These valuations indicate upward movement in the market values of these properties compared to their carrying amounts, hence no indication of impairment for all investment properties. Directors are of the view that the fair value of these properties as at 30th June, 2019 are not materially different from the values obtained at 30th June, 2018 and have therefore not recognised any impairment charge during the period.

- **18.1** The Company carries out periodic review and financial assessment of customers before products are supplied on credit. Credit customers are categorised according to the determined default risk rating. High risk customers are required to provide bank guarantees for credit sales. The Credit Committee assesses the status of all credit customers periodically. See Note 4.11 (Impairment) and Note 6 (Financial Risk Management).
- 18.2 This balance relates to outstanding subsidy receivable from Petroleum Products Pricing Regulatory Agency (PPPRA) which represents interest on delayed payments and foreign exchange differential claims under the PSF scheme recoverable from PPPRA on PMS imported by Forte Oil Plc. The foreign exchange differential represents differences between the rate used by PPPRA in pricing Power Motor Spirit (PMS) and the actual rates the foreign exchange in respect of these products importation were purchased. Promissory notes was issued to the oil markerters as part settlement of these outstanding in December, 2018. The balance of N12.5bn is expected to be settled with a one year promissory note.
- 18.3 This is one of the promissory notes received from the Federal Government as a part of the outstanding subsidy.

#### 18.6 Petroleum Equalisation Fund (PEF) receivable

This balance relates to bridging allowance net of bridging claims due to Petroleum Equalisation Fund (PEF). Bridging claims, raised against the Federal Government of Nigeria, are costs incurred in transporting white products (excluding deregulated products) from specific PPMC depots to approved areas. Bridging allowances are compulsory contributions on each litre of white product lifted, to assist the Federal Government defray costs arising from bridging claims. Bridging claims are usually set off against bridging allowances to establish the net amount due from the PEF, an organ of the Federal Government of Nigeria responsible for managing the process.

## 19. Cash and cash equivalents

Bank balances	11,186,859	299,638
Short-term deposits (Note 19.1)	543,527	854,631
Cash and bank balances	11,730,386	1,154,269

d) Share premium	8,071,943	8,071,943

#### e) Other reserves

Other reserves represent the carried forward, other comprehensive income and expenses plus current period other comprehensive income attributable to shareholders.

### f) Retained earnings

Retained earnings represent the carried forward recognised income net of expenses plus current period income attributable to shareholders.

Balance at 1 January	6,418,039	5,805,859
Profit for the period	5,450,563	631,471
Effect of retrospective adoption of IFRS 9	-	(19,291)
Dividend paid	(1,500,785)	
	10,367,817	6,418,039

### g) Treasury stocks

This represents 5,599,087 units (at the market value of N248 as at the date of the transfer) of the company's existing shares transfered to Forte Oil Plc to enable the Company recover the dividend and interest received on unpaid shares in 2009 by a shareholder. These shares were seized by the company on the ruling of the Security and Exchange Commission (SEC). The shareholders at the 37th Annual General Meeting held on the 26th of April, 2016 approved the re-issue of these shares to existing shareholders of the company on a pari passu basis at the market price of N300 per share.

### 22. Long term employee benefits

The Company operates a funded long term employees plan (gratuity) for qualifying employees of the Company. Under the plan, the employees are entitled to a lump sum benefits on attainment of a retirement age or on disengagement after contributing a specific number of years in service. No other post-retirement benefits are provided to these employees. The most recent actuarial valuations of the present value of the defined benefit obligation were carried out as at 30th June 2019 by KMC Acturial Service. The present value of the defined benefit obligation, and the related current service cost and past service cost, were measured using the Projected Unit Credit Method with acturial valuation being carried out at the end of each reporting period.

The movement in the present value of the other long term employee benefits was as follows:

	30-Jun-19 <del>N</del> '000	<b>31-Dec-18</b> N'000
Gratuity liability at 1 January	468,546	473,372
Current service costs	248,674	97,347
Transfer of employee service cost	9,072	-
Provision no longer required	(13,368)	-
Payment during the period	(483,820)	(102,173)
Gratuity liability	229,105	468,546
Planned asset at 1 January	(563,910)	(489,414)
Additional funding during the period	-	-
Actual return on planned assets	(39,547)	(74,496)
Disposal of subsidiary		-
	(374,352)	(95,364)
Expense recognised in comprehensive income		
Current service costs	248,674	97,347
Return on planned assets	(39,547)	(74,496)
Charged to profit or loss	209,127	22,851

## NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE 2019

- (a) Long term employee benefit expense is recognised in administrative expenses in the statement of profit or loss.
- (b) The actuary valuation report was signed by Miller Kingsley (FRC/2013/NAS/00000002392) of KMC Actuarial Services a fellow of Society of Actuaries, USA.
- (c) The planned asset is held by four fund managers: Pensions Alliance Limited (PAL); FSDH Asset Management Limited, Cardinal Stone Securities Limited, and Afriinvest Securities Limited.

The assets are placed in Treasury bills, Bonds with quoted market price in the active Nigerian bond market and Fixed deposits are placements with financial institutions and do not have quoted prices.

The plan typically exposes the Company to actuarial risks such as; assets volitility, interest rate risk, life expectancy, salary risk, changes in corporate yeilds and inflation risk.

#### **Asset volatility**

The present value of the defined benefit plan liability is calculated using a discount rate determined by reference to high quality corporate bond yields; if the return on plan assets is below this rate, it will create a plan deficit. Currently the plan has a relatively balanced investment in Government Securities and money market instruments. Due to the long-term nature of the plan liabilities, the board of the pension fund considers it appropriate that a reasonable portion of the plan assets should be invested in equity securities and in real estate to leverage the return generated by the fund.

#### Interest Rate Risk

A decrease in the bond interest rate will increase the plan liability; however, this will be partially offset by an increase in the return on the plan's debt investments.

#### Life Expectancy

The present value of the defined benefit plan liability is calculated by reference to the best estimate of the mortality of plan participants during their employment. An increase in the life expectancy of the plan participants will increase the plan's liability.

#### Salary Risk

The present value of the defined benefit plan liability is calculated by reference to the future salaries of plan participants. As such, an increase in the salary of the plan participants will increase the plan's liability.

### Changes in bond yields

A decrease in corporate bonds yield will increase plans liabilities.

### Inflation Risk

The majority of the plan's assets are either unaffected by fixed interest bonds or loosely correlated with equities inflation, meaning that an increase in inflation will also increase deficit.

There are two categories of employees in Forte Oil Plc; first category are those on direct long term contract with the company, while the second category are Associates on secondment to Forte from other companies. Only the former are covered by this longterm benefit.

#### 23. Loans and borrowings

This note provides information about the contractual terms of the Company's interest-bearing loans and borrowings, which are measured at amortised cost.

## NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE 2019

**23.1** In December 2016, The company issued N9billion unsecured corporate bond for a 5year tenor and at a coupon and effective interest rate of 17.5% and 19.43% respectively.

The net proceeds were used to refinance existing commercial bank loan obligations and to immediately finance the company's retails outlet expansion strategy.

The restriction to the bonds issued are as follows but not limited to below:-

- a give prior notice to the Trustees of any proposed redemption and, if it shall have given Notice to the Bondholders of its intention to redeem any Bonds, duly proceed to redeem such Bonds accordingly.
- **b** not (and ensure that none of its Subsidiaries shall) without the consent of the Bondholders and Trustees:
- bi incur any Indebtedness above the sum of Five Billion Naira (N5,000,000,000);
- bii dispose any of its assets above the sum of Five Billion Naira (N5,000,000,000);
- c give to the Trustees and Bondholders a Notice prior to the acquisition of any company/business/assets where the cost of such acquisition when aggregated with the cost of any other acquisition of any company/business/assets by the Issuer during the financial year of the proposed acquisition, exceeds the total sum of Five Billion Naira (N5,000,000,000).

Borrowinge are initially measured at fair value, net of transaction costs incurred. Borrowings are subsequently measured at amortised cost. Any differences between the proceeds (net of transaction costs) and the redemption value is recognised in the statement of profit or loss over the year of the borrowings using the effective interest method. The carrying values of borrowings approximate their fair value.

23.2 Import finance facilities represents short term borrowings obtained to fund letters of credits for petroleum product importation. These facilities are secured with the product financed, the Petroleum Subsidy Fund receivable on them if applicable and any sinking fund of the company.

## NOTES TO THE INTERIM FINANCIAL STATEMENTS FOR THE PERIOD ENDED 30 JUNE 2019

.

- 24.1 This balance relates to bridging allowance net of bridging claims due to Petroleum Equalisation Fund (PEF). Bridging claims, raised against the Federal Government of Nigeria, are costs incurred in transporting white products (excluding deregulated products) from specific PPMC depots to approved areas. Bridging allowances are compulsory contributions on each litre of white product lifted, to assist the Federal Government defray costs arising from bridging claims. Bridging claims are usually set off against bridging allowances to establish the net amount due to the PEF, an organ of the Federal Government of Nigeria responsible for managing the process.
- 24.2 Inventory accrual accounts includes liability accrued for product and associated costs. This account holds accruals for value of goods received pending receipt of supplier's invoices.
- 24.3 This consists of transporters freight account, withholding tax liabilities, VAT, rents received in advance, PAYE, NSITF, and unclaimed dividends.
